

LAST MILE HEALTH CARE

HOW FAITH-BASED WORKERS AND MOBILE CLINICS ARE BRINGING HEALTH, HEALING, AND HOPE TO POPULATIONS IN CRISIS SETTINGS

THE CHALLENGE: AN ACCESS GAP IN CRISIS SETTINGS

Millions of people, especially women, adolescent girls, and displaced populations, face severe barriers to care. For many, seeking care can be dangerous or impossible.

Key Points

THE SOLUTION: MOBILE CLINICS

Mobile clinics are agile, rapidly deployable health units that bring essential services directly to communities when permanent facilities are unavailable. They are staffed with skilled clinical health professionals and supported by community health workers for outreach and follow-up.

In fragile, remote, and conflict-affected settings, mobile health clinics supported by faith-based organizations (FBOs) are trusted and committed to reaching those left behind by traditional health systems.

Why They Work

- Transportable and adaptable to context
- Rapid deployment during emergencies
- Effective in remote, disaster, and conflict zones
- Designed to ensure dignity, safety, and access

What Services They Deliver

- Maternal, newborn, and child health (MNCH)
- Sexual and reproductive health (SRH)
- Antenatal and postnatal care
- Immunization services
- Mental health and psychosocial support
- Nutrition screening and treatment
- Screening for chronic diseases (diabetes, hypertension)

IMA WORLD HEALTH
A Corus International organization

Advanced Mobile Care in High-Need Settings

- On-site laboratory services
- Handheld gestational ultrasound
- Minor surgery and orthopedic care
- Dental and eye care
- Mental health specialist services
- Training platforms for local health workers

Tailored, Context-Responsive Care

- Rapid needs assessment and service mapping
- Flexible service models and timelines
- Engagement with communities and authorities
- Continuous adaptation as conditions evolve
- Protection, confidentiality, and safety central to design
